

Empathy Map

Date	1 Jun 2026
Team ID	xxxxxx
Project Name	Smart Crop
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS

*"I want to know which crop is best for my soil parameters (N, P, K, pH) so I can get maximum yield."
 *"How will changing rainfall patterns and humidity affect my productivity this season?"
 *"We need reliable crop-environment relationship patterns to formulate evidence-based regional farming strategies."

THINKS

*Is my current soil treatment and fertilizer usage optimized for crop compatibility and resource efficiency?
 *Can software intelligence actually predict environmental suitability better than traditional farming instincts?
 *How can we systematically guide stakeholders and farmers toward sustainable agricultural practices?

	PERSONA NAME <i>(Role / User Type)</i>	
DOES *Enters comprehensive environmental and soil inputs (Nitrogen,Phosphorous,Potassium, temperature, rainfall, pH) into the platform. *Evaluates smart recommendations and crop compatibility assessments to mitigate financial risks. *Analyzes data-driven insights and agricultural trends to design policies and resource optimization models.		FEELS *Anxious about fluctuating weather, unpredictable soil productivity, and resource waste. *Empowered when provided with intelligent, data-driven optimization strategies. *Optimistic about achieving optimal yields and advancing sustainable agriculture practices.
