Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1	Stage 2	Stage 3
Actions <i>What does the customer do?</i>	*Farmer enters exact local soil parameters: Nitrogen (N), Phosphorous (P), Potassium (K), and pH levels.	*User selects a target crop variety to evaluate against existing field conditions.	*Agricultural researcher queries integrated historical crop-environment relationship matrices.
Touchpoint <i>What part of the service do they interact with?</i>	* OptiCrop digital data entry dashboard interface.	* Crop Suitability Indicator dials and automated grading gauges.	* Advanced Macro-Analytics Reporting Suite.
Customer Thought <i>What is the customer thinking?</i>	*"Are these manual N-P-K metric values precise enough to truly maximize my yield?"	* "Is my current plot safe for this high-value crop variety given current soil degradation?"	"Are these macro trends reliable enough to validate long-term evidence-based farming policies?" policies?"
Process Ownership <i>Who is in the lead on this</i>	* Lead: Frontend UI/UX Team & Soil Sensor Data Integration Engineers	* Lead: Core Agronomy Algorithm Models & Predictive Machine Learning Core	*Lead: Big Data Infrastructure Engineers & Corporate AgTech Policy Analysts

Opportunities <i>How can we improve this stage?</i>	*Integrate direct IoT-enabled soil hardware probes to bypass manual, error-prone data entry.	* Introduce simulation tools showing how soil treatment (e.g., lime for pH correction) improves crop scores.	*Build export pipelines for GeoJSON and regional CSV maps to better inform policymaking stakeholders.
