

Demonstration of Proposed Features

Date	1 Jul 2026
Team ID	XXXXXX
Project Name	Smart Crop
Maximum Marks	1 Mark

Demonstration of Proposed Features:

This document captures all the features that were proposed during the project planning phase and tracks whether each feature was successfully implemented and demonstrated. It serves as evidence of the team's ability to deliver on the proposed solution.

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Soil & Climate Parameter Ingestion Module	Developed user input interfaces for Nitrogen (N), Phosphorous (P), Potassium (K), soil temperature, humidity, pH, and rainfall parameters.	Implemented	Yes	Inputs successfully captured and validated for data integrity.
2	Predictive Crop Recommendation Engine	Core machine learning or rule-based processing engine that analyzes environmental matrices to recommend the single most suitable crop for maximum yield. <i>(Fulfills Scenario 1)</i>	Implemented	Yes	Successfully recommended ideal crops based on random test soil samples during dry runs.
3	Crop Suitability & Compatibility Evaluator	Feature allowing users to choose a specific target crop and run an evaluation against existing soil and climate conditions to measure productivity potential. <i>(Fulfills Scenario 2)</i>	Implemented	Yes	Output matches input parameters perfectly, generating detailed compatibility and environmental alignment percentages.
4	Historical Pattern & Relationship Analytics Dashboard	Data analysis tools and visualization graphs for tracking long-term crop-	Implemented	Yes	Displays trends and patterns cleanly, providing solid

		environment interactions. (<i>Fulfills Scenario 3</i>)			metrics for strategic resource planning.
5	Agricultural Policy Support & Report Generator	Automated reporting tool helping policymakers export aggregated analytics data into actionable, evidence-based strategy documents. (<i>Fulfills Scenario 3</i>)	Implemented	Yes	Generates clean, downloadable summaries designed for sustainable farming resource optimization.
6	Farmer-Friendly Dashboard & UI Layout	Intuitive, simplified front-end application layout crafted to ensure everyday farmers can easily use the recommendation features without scientific background hurdles.	Implemented	Yes	Evaluated and optimized for fast processing speeds and smooth navigation.

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
