

Project Demo Planning

Date	2 Jul 2026
Team ID	XXXXXX
Project Name	Smart Crop
Maximum Marks	1 Mark

Project Demo Planning:

A well-structured demo plan ensures that the team presents the project effectively, covering all key aspects in a clear and organized manner. This document outlines the plan for demonstrating the project, including the flow of the demo, key features to highlight, and responsibilities of each team member.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Problem Statement	Present traditional farming challenges and introduce OptiCrop's objective of data-driven production optimization using N, P, K levels, climate, and soil factors.	2 mins	Team Member 1
2	Scenario 1 Demo: Smart Crop Recommendation	Live execution entering N, P, K, soil temperature, humidity, pH, and rainfall to generate instant crop recommendations for maximum yield.	3 mins	Team Member 2
3	Scenario 2 Demo: Suitability Assessment	Demonstrate the evaluation module by testing current soil/climate conditions against a specific target crop to show productivity compatibility.	3 mins	Team Member 3
4	Scenario 3 Demo: Research & Policy Dashboard	Showcase analytics tools designed for researchers and policymakers to identify production patterns and make sustainable resource optimization decision	3 mins	Team Member 4
5	Architecture & Sustainability Impact	Briefly explain how integrating these environmental parameters leads to resource efficiency and sustainable agricultural practices	2 mins	Team Member 1/2

6	Summary & Conclusion	Conclude with project takeaways on how the engine advances the understanding of crop-environment interactions. Open the floor for feedback	2 mins	All Members

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Introduce OptiCrop, set the agricultural context, and outline the core goals of resource efficiency and optimal crop yields
2	Solution Overview	High-level walkthrough of the system capabilities and the engineering behind data-driven crop-environment interactions
3	Live Feature Demonstration	Execute all 3 primary scenarios sequentially: User Crop Recommendation -> Suitability Assessment -> Policy Planning Analytics.
4	Q&A Session	Address panel queries regarding parameter weightage, engine accuracy, and scalability for different crop types.
